# Value-added services: Much more than just logistics!

## Value-added services in Hildesheim

In addition to professional contract logistics services along the supply chain, DB Schenker in Hildesheim offers customized value-added services that are tailored precisely to your products and processes. For example, in Hildesheim rooftop aerials are assembled for an automotive supplier. A workshop specifically built for this purpose is available in an ESD controlled area.

Another example of a value-added service are locksmith services provided by DB Schenker in Hildesheim for an international safe manufacturer. Specially trained and experienced employees manufacture safes in accordance with the customer's requirements (build-to-order). Thanks to these value-added services, our customers were able to reduce their stockholding costs and organize their value chains more efficiently and economically.

## What can we do for you?

We will work with you to find the right solution for you and elevate your logistics to the next level.

## Shared Logistics Center: the concept

The advantages are obvious: A shared logistics center offers the ideal requirements for demanding customers wishing to optimize their logistics processes relating to warehouse, distribution and shipping. By consolidating human and spatial resources in the logistics center and using the synergies resulting from this, customers can respond to changing requirements, for example due to seasonal fluctuations.

By doing so, we offer our customers precisely the flexibility they need. As a result, logistics processes become more efficient and storage costs can often be significantly reduced.
