

A photograph of a highway with two lanes. In the foreground, a white DB Schenker truck with a Mercedes-Benz truck head is driving towards the camera. The truck has 'DB SCHENKER' written on the front and side. In the background, another DB Schenker truck is driving away, and a silver car is in the adjacent lane. The road is bordered by a metal guardrail and a grassy embankment with trees.

# DB SCHENKER *part load* and DB SCHENKER *full load* Part and full load shipments directly to the consignee

Intended for business to business customers DB SCHENKER ***part load*** and DB SCHENKER ***full load*** are transportation services for shipments directly from a consignor to a consignee. DB Schenker's land transport network covers every corner of Finland and Europe.

Part load refers to the transportation of shipments weighing 2,500 kg or more with a volume of 7.5 m<sup>3</sup> or more or over 2.4 m in length delivered to the consignee, typically without terminal processing. Full load refers to the transportation of a full transportation unit from the consignor to the consignee without terminal handling. The most common transportation units include swap bodies, trailers and combinations of these.

You can order DB SCHENKER ***part load*** and DB SCHENKER ***full load*** services using mySchenker (domestic) or eSchenker (international) online service. Our certified quality, environmental and security policy and the AEO F status from the Finnish Customs underline the reliability of our partnership.

## Need more information?

Call 010 520 01 or visit us online at

**DB SCHENKER***part load* and **DB SCHENKER***full load* services are provided according to current freight rates, service fees and the General Terms and Conditions. The relevant information is available via our website or your contact person. Below you will find an overview of the key features of the service.

### Transportation order and additional services

Place your export and domestic transportation order by 12 noon on the working day preceding the desired pick-up date at the latest. You can place your transportation order via online services by 1 p.m. on the working day preceding desired pick-up. Place your import transportation order no later than two working days before your desired pick-up date. When placing your order, indicate the actual weight, volume and cargo space your shipment needs in loading meters. You can also supplement your transportation with the following value added services:

- part and full load shipment unloading and loading with a tail lift
- delivery or pick-up at a specific time
- transportation of dangerous goods with classification restrictions
- same day pick up in Finland
- heated transports from October 1 to April 30 in Finland
- delivery to private persons in Finland
- customized crane services in domestic transportation

### Pricing

Prices are based on the selected product option, the transportation route and the tax weight of the shipment.

### Consignment size and measures

The volume of a part or full load shipment is over 7.5 m<sup>3</sup> or 1.35 loading meters, its weight is 2,500 kg or more, or the length of a single parcel is more than 2.4 m. The shipment must be packed and suitable for mechanical handling.

Separate terms are applied to handling and defining the tax weight of **long goods** (over 2.4 m). Pricing of long goods is described more specifically in connection with value added services for [domestic land transport in Finland](#) and for [international land transport](#).

### All services under one roof

We provide comprehensive solutions, from transportation to warehousing and value-added services. With our help, you can reach your customers easily in Finland and abroad.

### Check-list for smooth transportation

1. Place your transportation order via online services early enough and enter the actual weight, volume and loading meters of your shipment.
2. Pack your shipment so that it is suitable for mechanical handling
3. Attach an address label with an SSCC barcode to each package of a partial load and long goods.

Track your shipment with *mySchenker* or *eSchenker* online service.

### Transport documents and address labels

Each shipment required transport documents and address labels with SSCC barcodes. Attach the address labels to each part load package and long goods. Full cargo loads do not require an address label. The required transportation documents and address labels with SSCC barcodes are available on the mySchenker and eSchenker online service. Authorities may also require other transportation documents depending on the type of product and transportation location. A transportation document made by the consignor is only a backup for a driver and it doesn't follow the shipment all the way. Please inform the consignee beforehand.

The time-related value-added services for the import and export transports in EU's external trade with **DB SCHENKER***part load* and **DB SCHENKER***fullload*, are only available if the shipping documents and customs declarations have been prepared with DB Schenker companies, not with third parties.

### Pick-up

We pick up shipments ordered by the deadline by 4 p.m. on the following working day or according to the chosen value added service option or by separate agreement. We will pick up shipments using line haul vehicles and their standard equipment, unless otherwise agreed upon. The pick-up location must be manned at the agreed pick-up time. The sender must pack the shipment, as well as load and fasten it to the load space.

### Delivery

Shipments are delivered to the delivery address that is indicated in the order and is freely accessible by a vehicle combination. It must be possible to deliver shipments using the same transportation unit with which the shipments were picked up. Shipments are only handed over to the recipient indicated in the order, and the recipient must unload part and full load shipments using their own equipment.

We also deliver services that require special expertise tailored for your transportation needs.

**DB SCHENKER***project and special*

If your shipment exceeds the transport vehicle's maximum permitted cargo width, height or length, we can provide specialized transportation services. We offer tailored solutions for specialized transportation in Finland and abroad. Our team will handle the logistics, special permits, interim storage, and overall logistics project planning.

**DB SCHENKER***coldsped*

We deliver temperature-controlled consignments of all sizes, monitoring the temperature throughout the process. Our network covers every corner of Finland, the Baltic countries and Continental Europe.

**DB SCHENKER***multimodal solutions*

We provide efficient, environmentally friendly, multimodal transportation solutions combining the best features of road, ocean and rail transportation. Multimodal transportation services are used for example in transportation across the Alps.
